

# OPSCAN *i*NSIGHT 4 SCANNER DATA SHEET

*Combines OMR Processing  
with Imaging Capabilities*

The new OpScan *i*NSIGHT™ 4 scanner combines high accuracy optical mark read (OMR) processing with expanded imaging functionality, enhancing your data collection capabilities.

## *A New Generation in Data Collection*

Pearson NCS' OpScan *i*NSIGHT 4 scanner, in combination with the Image ScanTools™ software, is the next generation of desktop scanning. With a single pass through the scanner, you can capture data in a variety of different formats, including:

- Traditional OMR bubbles
- Check and X box responses
- Bar codes
- Hand printed information
- Machine printed information
- Image clips
- Full page image capture

## *Expand your iNSIGHT*

Gain more insight to your data, with these exciting new capabilities of the OpScan *i*NSIGHT 4 scanner.

***i*CR** (Real Time OCR) allows customers to automatically capture and recognize hand printed and machine printed numeric data from forms, eliminating the need to pre-slug grids.

***i*NAME** is a file naming tool that allows end-users to save images and utilize Microsoft® Windows Explorer® for easy retrieval. Whether you are saving an image clip or doing full page image archive, the *i*NAME functionality is a cost effective solution. If robust document management is needed, images and the index values may be imported into Legato's ApplicationXtender® product.

***i*EDIT** eliminates the need to sort through stacks of paper to find a scanned form identified as needing editing. An image of the scanned form is displayed at a workstation for the operator to make any corrections or enter any additional information.

***i*TEST** allows users to scan, score and store short answer and "show your work" areas on answer sheets. The *i*TEST option includes the pre-defined application programs for overprinting, scanning, and archiving two standard test answer sheets to make setup easier and quicker. Using this program, you can save images and export data to Remark Classic OMR® for convenient analysis and reporting. In addition, you can continue to perform standalone test scoring with our optional SelfScore® module.

***i*SURVEY** is an option that allows users to scan, clip comments and either key enter them or save for future review. Standard survey forms and application definitions will make set up and administration easy. The survey data may be easily imported into SurveyTracker Plus® for complete analysis and reporting.
